In-text citations	
Basic citation format	<p>Resources in the reference list should be cited using superscripted digits. Superscripted citations should only follow terminal punctuation (e.g., periods, commas, closed quotation marks, question marks, exclamation points).</p> <p>This phenomenon frequently occurs in nature.<sup>3</sup></p>
Multiple resources cited	<p>When citing two resources in the same callout, separate them with a comma. No space should appear between the digits:</p> <p>This phenomenon frequently occurs in nature, experts agree.<sup>3,4</sup></p> <p>When citing multiple resources that are not consecutively numbered in the same callout, separate them with commas. No space should appear between the digits:</p>

Issued 2018

**Warning - not controlled when printed. Maintained by Head Copyediting, Taylor & Francis Journals.**

	<p>This phenomenon frequently occurs in nature, experts agree.<sup>3,4,28</sup></p> <p>When citing a span of three or more resources that are consecutively number in the same callout, include the first and last digits and separate them with an en-dash. No space should appear between digits:</p> <p>This phenomenon frequently occurs in nature, experts agree.<sup>3,4,28,29-31</sup></p>
Citation with a direct quotation	<p>Citations should be positioned outside the quotation mark that closes a passage in the running text that is drawn directly from a resource. The number of the page on which the quote is found should appear after the citation digit in "(p#)" format:</p> <p>One should live by the dictum, "Measure what is measurable, and make measurable what is not."<sup>18(p119)</sup></p> <p>Longer quotations (over 40 words) should be set off in a "block." Citations appear after any punctuation that ends block quotations, with a space separating the citation from the punctuation:</p> <p style="text-align: center;">... make measurable what is not.<sup>18(p119)</sup></p>
Author names	<p>The names of authors associated with a resource can be included in the running text along with a numerical citation.</p> <p>Wayne and Hartley<sup>12</sup> write ...</p> <p>The basic formats for citations with different numbers of authors are as follows:</p> <p>One author: Smith<sup>12</sup></p> <p>Two authors: Smith and Jones<sup>13</sup></p> <p>Three or more authors: Smith et al<sup>14</sup></p> <p>The phrase "et al" should not be followed by a period.</p>

Issued 2018

**Warning - not controlled when printed. Maintained by Head Copyediting,  
Taylor & Francis Journals.**

Tables and figures	Resources cited in tables or figure legends should follow the standard format and must be included in the reference list.
<b>Reference list</b>	
Order	<p>The references should be numbered consecutively based on the order of their first citation in the text. The first reference cited is "1.," the second "2.," and so on, in sequence. The digits should not be superscripted but should be followed by periods. References should also not be repeated in the list. The same resource, in other words, should not be given a different number with each subsequent mention in the text but should be cited on these later instances using the number assigned to it in the reference list at its first citation.</p> <p><u>Example</u></p> <p>This is the first citation of Green.<sup>23</sup> This is an intervening citation by a different author.<sup>24</sup> This is a subsequent citation of the same reference by Green.<sup>23</sup></p> <p>References</p> <p>23. Green ML. Journal article.</p> <p>24. Blue KW, Red JR. <i>Book Title</i>.</p>

Taylor & Francis Journals.

<p>Form of author name</p>	<p>For all authors, use initials, without periods or spaces between them, in lieu of expanded given and middle names. Include the authors' surnames in full. The listing for each author should be in inverted-order surname-first format. Commas should separate individual author names. The word "and" should not precede the final author name for reference entries with six or fewer authors. If more than six individuals authored a resource, the reference entry documenting the resource should list the first three authors followed by "et al."</p> <p style="text-align: center;"><u>Up to Six Authors</u></p> <p><u>Format:</u> #. Author AZ, Author BY, Author CX</p> <p style="text-align: center;"><u>More Than Six Authors</u></p> <p><u>Format:</u> #. Author AZ, Author BY, Author CX, et al.</p> <p style="text-align: center;">***</p> <p>If an organization is the author of a resource, the full name of the organization can appear in the reference:</p> <p>8. British Standards Institution.</p> <p style="text-align: center;">***</p> <p>If a resource has no author, the reference entry should begin with the title of work:</p> <p>12. <i>Authorless Book Title.</i></p>
<p>Titles</p>	<p>The titles of book chapters and journal articles should appear in Roman font with sentence style capitalization. The titles of books, journals, reports, and papers should appear in italics with headline style capitalization (i.e., capitalize first words of title and subtitle, as well as all nouns, pronouns, verbs, adjectives, and adverbs, regardless of length, and conjunctions and prepositions longer than four letters). The titles of journals, moreover, should be abbreviated in accordance with US National Library of Medicine (NLM)/MEDLINE standards.</p>

Issued 2018

**Warning - not controlled when printed. Maintained by Head Copyediting, Taylor & Francis Journals.**

Place of publication and publisher name for books and reports	<p>Any initial “the” and concluding “Inc.,” “Ltd”, “Co.,” “Publishing Co.,” etc. should be omitted from the publisher name in the reference entry. The place of publication should always include a state/province abbreviation or country, even if the city is a familiar one.</p> <p>Cambridge, MA: Harvard University Press  Cambridge, UK: Cambridge University Press  New York, NY: Macmillan  Englewood Cliffs, NJ: Prentice Hall  Washington, DC: Smithsonian Institution Press  Chapel Hill, NC: University of North Carolina Press</p>
Issue numbers and DOIs for journals	<p>The issue number can be omitted if the journal is paginated consecutively through the volume (or if month or season is included), but it is not incorrect to include it.</p> <p>DOIs are standard elements of journal reference entries. Authors, though, are not required to retrieve DOIs for references.</p>
In press	<p>“In press” should be used in lieu of a publication year for any in-press references.</p>
Pagination	<p>With page ranges, include all digits, even if the end page number repeats the thousand and/or hundred digit(s) found in the first page number.</p> <p>2. Nguyen FM, Anh LN. Title of journal article. <i>Jrnl Title</i>. 2012;1:1137–1178.</p> <p>3. Valesco B. Title of book chapter. In: Ricardo JA, ed. <i>Book Title</i>. City, Stat Abbr: Publisher; 2015:623–654.</p> <p style="text-align: center;">***</p> <p>If an online journal employs e-location or a similar identification system in lieu of pagination, the journal’s method should be retained for the reference entry.</p>
<b>Book</b>
