

USER MANUAL

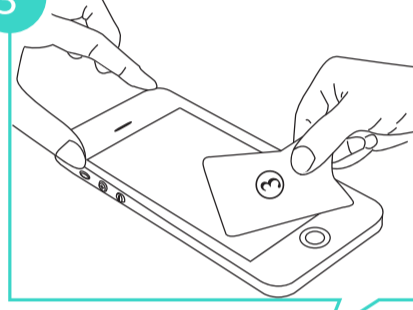

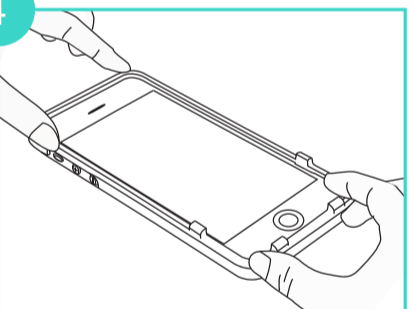

Please scan QR code to see the video tutorial of the screen protector, make sure watch the tutorial before installation

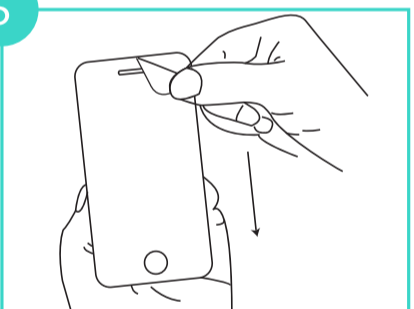

Before using the product, be sure to read this guide carefully and following the instructions

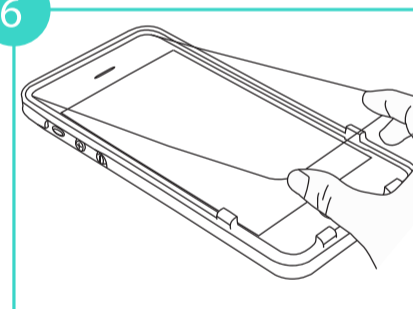

- 

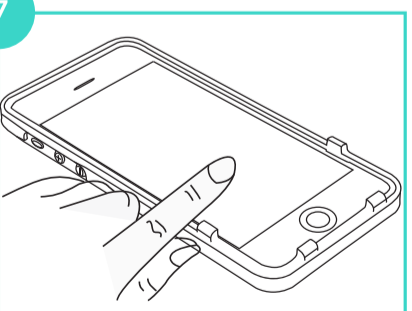

1) Preparation: your phone, plastic guide template, screen protector and cleaning kits.
- 

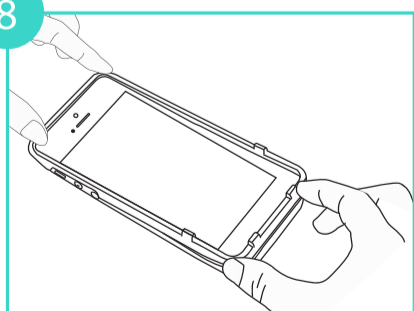

2) Use the wet wipe (No.1) to clean the screen thoroughly and the dry wipe (No.2) to remove wet wipe residue.
- 

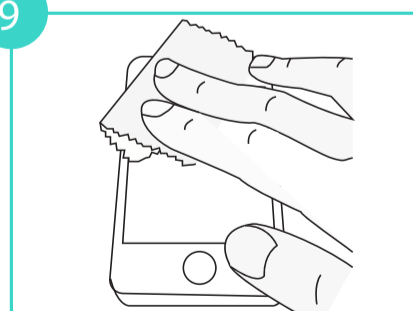

3) Use the dust sticker (No.3) to remove any dust particles.
- 

4) Place the plastic guide template over the phone, Be careful not to touch the screen.
- 

5) Peel the backing from the protector and don't touch the adhesive side, otherwise there will be dots left on the screen.
- 

6) Align the screen protector with the guide template and let it gently drop into place until the bubbles slowly spread out of it.
- 

7) Press the middle of the screen protector toward the edge to remove the air bubbles if necessary.
- 

8) Remove the plastic guide template gently.
- 

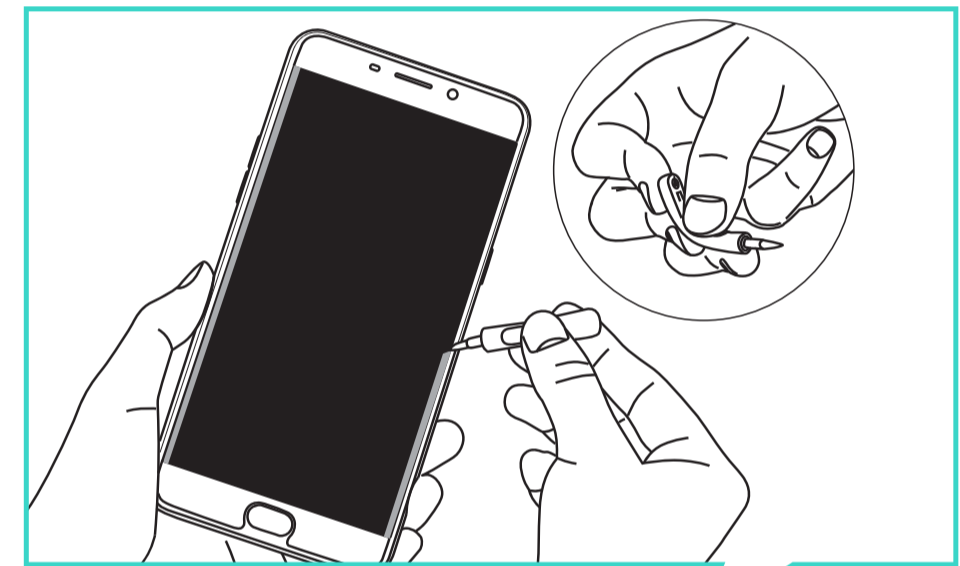

9) Wipe the surface of screen protector with dry wipe (No.2) to remove any dust and to make sure the screen protector is firmly installed.

Caution

- 1) For step 5, be careful not to touch the adhesive side of the screen protector with your fingers when peel the backing. Or there will be unwanted dots left on the screen after you install the screen protector.
- 2) It is best to finish screen pasting in one time. Repeat pasting will lead to less adhesion.
- 3) Install the screen protector or remove the screen protector gently and carefully.
- 4) If there is white edge (halo effect on the protector edges), run a bead of the gel provided around the edge of the screen and gently press it all around the edge. Please refer to manual in the name of "How to eliminate the white edge". Please kindly note the gel (No.4) is a non-essential accessory which is used to eliminate white edge, the specific product is subject to the actual product in the box

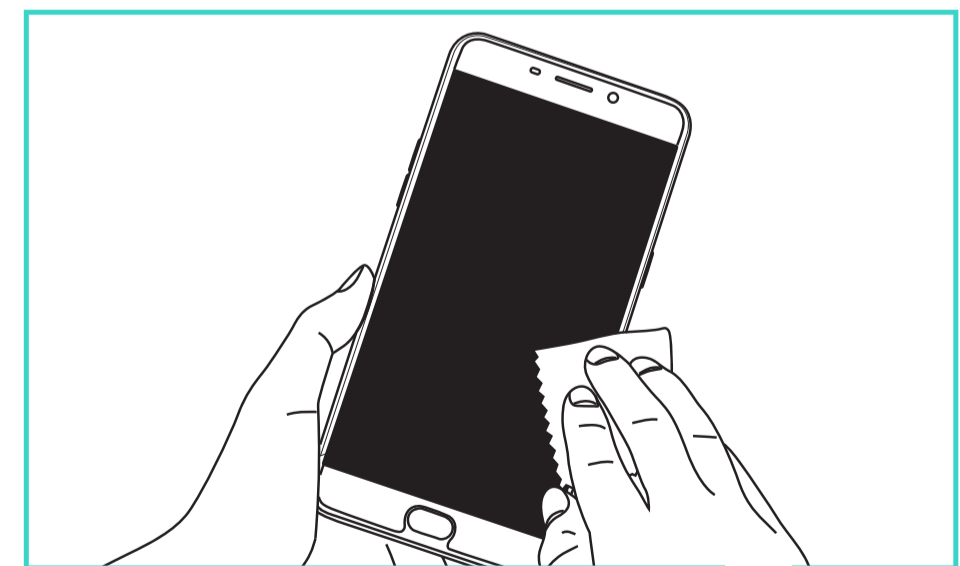

How to eliminate white edge?

Attention: The gel (No.4 accessory) is made of vegetable oil and it is safe for phones screen. However, squeeze the gel out in an even amount while moving the gel from bottom to top on the phone edges. Be aware to avoid squeezing the gel out too much at a time on the phone screen.

Step 1

Squeeze the gel out with your hand gently to apply it between the white edge and the phone screen. Move the gel from bottom to top while squeeze it out to make sure the amount is even on the screen edges.

Step 2

Gently press on the white edges of the screen with dry wipe (No.2 in the accessory kit package) after applying the gel. It can dry the unwanted extra gel on the screen and make sure the screen protector is attached on the edges firmly.
